

API REFERENCE DOCUMENTATION

API CLIENTS

Admins can create OAuth clients through Settings → API Clients.

FIELDS:

- Client Name
- Grant Type: Client Credentials / Authorization Code
- Redirect URIs
- Status (Enable / Revoke)

AUTH FLOWS

1. CLIENT CREDENTIALS

Used by server-side integrations. Steps:

- Create client
- Request token from /oauth/token
- Use token to access tenant-specific endpoints

2. AUTHORIZATION CODE

Used when user permission is needed.

Steps:

- Redirect user to authorize
- Receive code
- Exchange code for token
- Access resources

EXPECTED ENDPOINT GROUPS

(Event, Ticket, Donation, Order, Category, Tag, Organizer, Venue, Forms, Custom Fields)

- /api/events
- /api/events/{id}
- /api/tickets
- /api/orders
- /api/donations
- /api/users
- /api/reviews
- /api/categories
- /api/tags
- /api/group-events

TOKEN MANAGEMENT

- Access token required for each request
- Tokens can be revoked by disabling API Client
